cost effective
solutions for
container
terminals

The Netherlands, Delta 2000-8, Terminal 3 West

Product:	Sealoflex®
Construction period:	2005
Quantity:	16,500 tons of asphalt
Location:	Maasvlakte Rotterdam
Layer structure:	50 mm Sealoflex® grouted macadam wearing course

Europe Container Terminal is the biggest transshipment company in Europe for containers, situated in the harbour of Rotterdam, the Netherlands. The company has three container terminals, including the ECT Delta Terminal.

The ECT Delta Terminal has been constructed by Ooms in 2005. The terminal handling is fully automated using Automatic Guided Vehicles. Due to the heavy load of the vehicles, an exceptionally strong pavement is required. Accordingly a Sealoflex® grouted macadam wearing course has been used and maintains an optimum life cycle of the terminal area.
